Amendment
February 24, 2004

Honorable Commissioner for Patents:

In response to the January 13, 2004 communication concerning the above identified patent application, please amend the application as follows.

In the Contents of the Application

Information is added to meet submittal requirements and the application pages are organized and numbered. All new sheets are attached to this amendment and dated February 24, 2004. These sheets will replace all previous sheets and documentation provided in the Original Application dated June 14, 2002 and the Continuance of Application dated January 27, 2003.

In the Summary of the Invention:

A new paragraph was added to further show that the invention is has merits over current devices that attempt to hold frames in square. The paragraph that was added is shown below and appears as the third paragraph on page 8 – Summary of Invention.

The adaptors will draw the corners of a frame together and maintain them level which current devices are not capable of doing because they are attached to the jaws on the beam clamping devices which are inherently loose and do not provide a support on the base like the Bar Clamp Corner Squaring Fixture.
